

Tilted Menu

This extension implements an animated 3D menu, where menu items 'tilt' when the mouse hovers over the item. Each menu item can have a different background color.

The menu has support icon libraries (WWB16.1+), like Font Awesome, Material Icons, Open Iconic, IonIcons etc. <https://wysiwygwebbuilder.com/iconfonts.html> Icons can also be published as embedded SVG to keep the page weight low.

Font

Specifies the font-family, style, color and size of the text.

Padding

Specifies the padding around the text, this also affects the height of the menu items.

Spacing

Specifies the spacing between menu items.

Alignment

Specifies the alignment of the text. By default, the alignment is set to 'alternate' because the tilt effect of the menu items is also alternated.

Perspective

The perspective property controls the 'tilt' effect. It defines how far the menu is away from the user. So, a lower value will result in a more intensive 3D effect than a higher value. It's possible to set a different perspective value on hover, to make menu items tilt more (or less) on mouse over.

Icon Offset

Specifies the spacing between the text and the icon.

Border

Specifies the border width and radius of the menu items. The border color is automatically determined based on background color of the items.

Animation

Specifies the easing and duration of the hover transition.

Box Shadow

Specifies the appearance of the box shadow.

The menu was implemented using CSS only (no JavaScript) so it's a light weight navigation component.
