

Border Menu

This extension implements an animated border menu. When the user clicks the hamburger icon, a full screen overlay border menu will appear. Menu items can have text and an icon. The menu is responsive and can have different font and icon sizes in breakpoints. The menu itself also has a breakpoint which makes it possible to hide text on smaller screens.

The menu has support icon libraries (WWB16.1+), like Font Awesome, Material Icons, IonIcons etc. <https://wysiwygwebbuilder.com/iconfonts.html>
Icons can also be published as embedded SVG to keep the page weight low.

Online Demo

<https://wysiwygwebbuilder.com/support/bordermenu.html>

Position

Specifies at which side of the page the menu will be displayed: top, bottom, left or right. For left and right, the menu will only display the icons where the text becomes visible on hover.

Border Width

Specifies the width of border. This value is responsive, so it can be different in breakpoints.

z-index

Specifies the z-index. This makes sure the menu is on top of all other elements on the page.

Button Size

Specifies the size of the hamburger icon. The icon will be transformed into a close icon when the menu is open.

Button Offset

Specifies the offset of the hamburger icon from the edge of the page. This can be used to align the icon in the center of the border.

Transition

Specifies the transition effect of the button when it's open/closed.

- **Rotate**
The bars will be transformed into a cross when the menu is open.
- **Translate**
The bars will be 'expanded' when the menu is open.

Width (%)

Specifies the width of the menu items in percentages.

Breakpoint

The breakpoint can be useful to hide the text on smaller screen, in which case only icons will be visible.

How to install this extension so it is available in WYSIWYG Web Builder?

You can use the Extension Manager (Menu->Tools->Extension Manager) to install this extension.

Alternatively, you can manually copy all files from the zip file to the Web Builder extensions folder. Usually this folder is in this location:

My Documents\WYSIWYG Web Builder\system\extensions\

Requirements

WYSIWYG Web Builder 12.2 or higher to support responsive font-size.

WYSIWYG Web Builder 16.1 or higher to support icon libraries.
